## **INTEGRA TELECOM ENHANCES VOICE AND DATA COMMUNICATION PRODUCTS**

### *Novus T1 Dynamically Integrated Services Now Available in Colorado*

**DENVER, Co., June 02, 2008** - Integra Telecom Inc., a facilities-based, integrated communications carrier for business, now offers Novus T1 dynamically integrated services (Novus T1) in Colorado. The new service combines local voice, long distance, and dynamically allocated Internet access on a single dedicated circuit; strengthening Integra's existing voice and data product set and allowing for faster data transport. Novus T1 increases Internet access bandwidth for Integra's customers by dynamically allocating bandwidth to either voice or Internet traffic, as needed, to provide more efficient data usage.

"Integra Telecom is dedicated to providing high quality voice and data products that meet the needs of our business customers," said Ken Worcester, senior vice president for Integra Telecom of Colorado. "Our Novus T1 dynamically integrated services allow us to effectively allocate bandwidth to the services our customers' need, when they need it most."

Integra Telecom's Novus T1 dynamically integrated services are available on analog lines, PRI channels or digital trunks. For businesses requiring greater bandwidth, Integra also offers a bonded version of the Novus T1 service. By bonding multiple Novus T1s, customers can receive up to 4.5Mbps of bandwidth. All Integra services are backed by locally-based customer care representatives and technicians.
